*Measuring cups with logos are an interesting alternative to conventional advertising gadgets. Thanks to durable and interesting prints, the measuring vessels gain valuable advertising value in addition to their practical function. All products are indispensable for everyday use for customers in many industries.*

## WHERE CAN YOU USE OUR SPOONS?

- animal nutrition
- pharmaceutical industry
- poultry farms
- food supplements
- food industry
- markets
- agriculture
- restaurants

Set contains:

# YELLOW TRAP-03 PREMIUM

TRAP03OP

Set contains:

Yellow vessel

Mounting bracket on the tube/rod O 20-24 mm

folding stick 160 cm

connector 3 pcs.

triangular box

# GRID TRAP NET

TRAPNET1

Grid protecting Bee

## Principles of use:

The vessel should be placed on the field just after seeding rapeseed in autumn and after the last snow melts in the spring. Install it approximately 20 m from the field edge, always at the level of the plants' top. It is recommended to use at least four vessels for each plantation.

Pour water with a bit of dishwashing detergent up to the half of the vessel's height. The addition of the detergent will reduce the surface tension of water which will make the pests immerse in it easier.

Monitor the vessel daily, i.e. count the immersed pests and read the pest limit threshold on the table printed on the vessel. Replace water in the vessel each time.

The yellow vessel should be installed on a stick and raised with the growth of rapeseed. After exceeding the pest limit threshold, decide whether you want to spray the field. The yellow vessel helps to diagnose the level of harmfulness done by such insects as: ceutorrhynchus, meligethes aeneus and dasineura brassicae.

# RAIN GAUGES

## RAIN GAUGES- EKO

D000001E

Set includes:

rain gauge stick-mount fixture packaging fixture

## RAIN GAUGES- STANDARD

D000001S

Set includes:

rain gauge stick-mount fixture adder's indicators packaging fixture

# RAIN GAUGES - PREMIUM

D000001P

**Set includes:**

rain gauge    stick-mount fixture with impregnated stick    adder's indicators    packaging box

**Features:**

- vertical scale up to 40 mm with accuracy to 0.5 mm
- expanded scale to 70 mm
- two indicators of the adder (in different colours) allowing to register precisely weekly, monthly and yearly rainfalls
- the adder allows to register the summary rainfall up to 250 mm (250l/m<sup>2</sup>)
- cone construction of the mounting ring guaranteeing the optimum setting of the rain gauge against the falling rain
- rain gauge protected with patent no (P.218270)
- box of rain gauge protected with industrial design no 18572
- imprint protected with EUIPO no 008303481-0001
- possibility to make any additional imprint

## FRAME STANDARD 1/10 m<sup>2</sup>

RAM0010S

## FRAME MEGA 1/4 m<sup>2</sup>

RAM0010M

### Principles of use:

#### Measuring the germination:

Put the frame along the row crop. Count the plants as long as you reach the number which determines the distance between the rows. The result has to be multiplied x10. Repeat the measurement in several places and calculate the average. The measurement of germination helps to make the decision about the re-sowing.

#### Measuring the damaged crops and the number of weeds:

Make a square and count the plants inside the frame. The result has to be multiplied x10. Repeat the measurement in several places and calculate the average. The determination of the number of damaged plants helps not only the framers but also the hunters to specify the damages caused by the wild animals. Measuring frame has the same function by the farmers insurances.

# THERMOMETER SOIL

## THERMOMETER SOIL - EKO

T000001E

## THERMOMETER SOIL- STANDARD (WITH A MOUNTING BRACKET)

T000002S

# THERMOMETER SOIL - PREMIUM PREMIUM PRO (PROBE 19 CM)

T000003P

The Premium set includes:

The Premium PRO set includes:

Soil temperature

Temperature of water

Air temperature

Mounting bracket

Handle for mounting on the bucket

Thermometers for measuring soil, liquids and silagethermometers with a longer needle. Farmer's thermometers are practical measuring instruments necessary in every farm. Agricultural thermometers also available with the logo.

# THERMOMETER THERMO 19/27

## THERMOMETER THERMO 19/27

THERM01

Set includes:

thermometer stand box

*Stylish thermometer for indoor use. It comes with a collapsible stand so that the thermometer can be placed anywhere, for example on a desk. The thermometer also has a hole that allows you to hang it on the wall. Recommended comfort zone temperatures: winter 19°C, summer 27°C.*

## CLEANING BRUSH NOZZLE+

SZ00001

Professional cleaning brush for nozzles. Every nozzle operator must have it in his pocket. On the short side are two faults, which measure the diameter of following caps: RAU - 17 mm and ARAG - 19 mm. There is also a notch for setting the nozzle at an angle of 8 degrees. Next to the small hole are two insets.

This is also the key, that facilitates the tightening the cap to the nozzles with a width of 8 mm or 11 mm.

### Colors:

## KNIFE LIZARD

NL00001

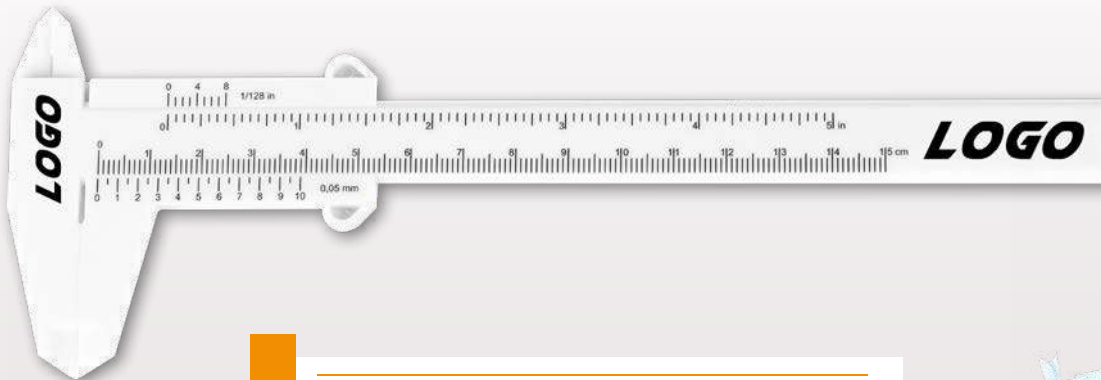

A small, ergonomic and handy knife for opening envelopes and packages. Pocket knife Lizard is intended for everyday use by everyone and also for companies in logistics departments. Logo printing possible.

## DIAL CALIPER MIL+

S000001

Practical, plastic dial caliper with inch scale.  
Measuring range: 0~150 mm Accuracy: +/- 0,05 mm  
Measuring range: 0~5 in Accuracy: +/- 1/128 in  
Different imprints colors available.

## OIL CAN JUMBO 5 l

KOJ050001

### Features:

Oil cans are suitable for: oil, petrol, naphthe, antifreeze liquids, brake fluid, electrolytes  
- can be used in industry, agriculture, and in work shops,  
- made of PE,  
- acid and oil resistant,  
- scale in liters and US quarts,  
- elastic spout,
